

CURRICULUM MAP

Subject	Chemistry
Head of Department	Mrs C Beck

SCHOOL INTENT

Rutlish School: Curriculum Intent

Rutlish School provides a meaningful, broad and balanced curriculum which is accessible to all, as well as supports and challenges all students. Through all we do, we prepare students for opportunities, responsibilities and experiences later in life for them to be aware of their responsibilities and feel confident to participate and contribute to society. We aim to inspire, enable and facilitate lifelong learners that build on their individual strengths and capabilities and achieve their ambitions. We seek to support our students in becoming healthy, happy, successful modern people young adults, who are knowledgeable, kind, aware, confident, capable and skilful members of society.

The school aims to:

- ensure that the curriculum is designed for every student of every ability and every background to be supported in making the best possible progress and attainment from their starting point; all students can access the curriculum offer, with planning and teaching that support, stretch and challenge all learners across a full range of abilities, and making any reasonable adjustments required where particular needs are identified;
- provide a curriculum that is sequenced to build skills and knowledge throughout students' time at Rutlish School, to promote a deeper understanding of the world outside the classroom and equip them for their next steps in education, careers and in life;
- ensure that our curriculum offer support different educational and career pathways, including EBACC and vocational;
- ensure our curriculum consistently promotes high moral standards, social and self-awareness and allows students to formulate informed opinions on social issues such as, equality, diversity and inclusivity as well as the practical aspects of society;
- enrich the curriculum and provide opportunities for students to build cultural capital, enhance a wide range of skills and knowledge beyond requirements of the national curriculum, and personalise and apply learning in other contexts;
- provide students with the skills and knowledge necessary to becoming independent, analytical, critical, and innovative thinkers and encourage students' curiosity, creativity, self-expression, resilience, and confidence; provide consistent opportunities for students to develop and enhance their reading skills, and support is provided to ensure all students are able to access the curriculum.

DEPARTMENT INTENT

-The science curriculum at Rutlish school is designed to give students the substantive and disciplinary knowledge they need to understand the science they come across in the world around them and differentiate it from pseudoscience. We aim to address any misconceptions that students may hold prior to lessons.

We aim to prepare the students for their future lives by giving them the skills to apply their knowledge in unfamiliar situations and to undertake a STEM career if they so choose. We aim to give them an understanding of the range of STEM careers available to them.

-We want to develop students who are analytical and open minded in their approach to new information, who understand the importance of taking an ethical approach to scientific decision making. We aim to strengthen our students as independent thinkers who understand the value of asking questions.

-Through our curriculum we aim to challenge students' preconceptions about science and the world around them. We aim to develop the understanding that science is for everyone.

Our curriculum is designed to encourage students' curiosity about the world around them and to help them make informed decisions throughout their lives.

KEY STAGE 3 RATIONALE/ INTENT

Ensure that all students are equipped with the foundation (building blocks) for Science. To instil an appreciation for Science. Develop practical skills and ensure that all students are on the same level when completing the KS3 Science course.

KEY STAGE 4 RATIONALE/ INTENT

Aim to give students an understanding of the range of careers available to them. Ensure that they are literate in science and have the ability to apply knowledge and skills to the outside world. Climate change/vaccines etc. Ensure they have the technical language. Ensure they have the motor skills and background knowledge especially needed in KS5.

KEY STAGE 5 RATIONALE/ INTENT

Providing the substantive knowledge to access the undergraduate course at university. Disciplinary knowledge – research skill.

YEAR 7

	Autumn 1	Autumn 2	Spring 1	Spring 2	Summer 1	Summer 2
KNOWLEDGE	UNIT OF WORK: 1. Particle Model	UNIT OF WORK: 2. Separating mixtures	UNIT OF WORK: 3. Periodic Table	UNIT OF WORK: 4. Elements	UNIT OF WORK: 5. Acids and Alkalis	UNIT OF WORK: 6. Chemical energy
	<ul style="list-style-type: none"> - Introduction to Chemistry - Solids, liquids and gases - Diffusion - Changing shape and compression - Expansion and contraction - Dissolving - How temperature affects solubility - Air pressure 	<ul style="list-style-type: none"> - pure and impure substances - Mixtures - filtration – separating mixtures - distillation – separating mixtures - chromatography – separating mixtures 	<ul style="list-style-type: none"> - periodic table - alkali metals - noble gases - halogens 	<ul style="list-style-type: none"> - elements - more about elements - compounds - writing chemical formulae - polymers and ceramics 	<ul style="list-style-type: none"> - identify acids and alkalis - how strong are acids and alkalis - neutralisation - uses of neutralisation 	<ul style="list-style-type: none"> - Exothermic and endothermic reactions - Energy change in state - Catalysts
	<p>Skills:</p> <ul style="list-style-type: none"> - make predictions using scientific knowledge and understanding Understand that scientific methods and theories develop as earlier explanations are modified to take account of new evidence and ideas, together with the importance of publishing results and peer review Make predictions using scientific knowledge and understanding Present observations and data using appropriate methods, including tables and graphs. 	<p>Skills:</p> <ul style="list-style-type: none"> - use techniques to separate mixture Literacy & Communication skills The use of facts and opinions to inform and persuade. Maths skills Qualitative and quantitative data The use of: tables; line graphs; scatter graphs; pie charts; and bar charts. Use appropriate techniques, apparatus, and materials during fieldwork and laboratory work, paying attention to health and safety. Literacy & Communication skills Use flow charts to present sequences. 	<p>Skills:</p> <ul style="list-style-type: none"> Literacy & Communication skills The use of facts and opinions to inform and persuade. Maths skills Qualitative and quantitative data The use of: tables; line graphs; scatter graphs; pie charts; and bar charts. Use appropriate techniques, apparatus, and materials during fieldwork and laboratory work, paying attention to health and safety. Literacy & Communication skills Use flow charts to present sequences. 	<p>Skills:</p> <ul style="list-style-type: none"> Evaluate data, showing awareness of potential sources of random and systematic error. Literacy & Communication skills Maths skills Identify anomalous results (outliers) Identify ranges Use a variety of charts and graphs to present and analyse data 	<p>Skills:</p> <ul style="list-style-type: none"> Evaluate risks. Literacy & Communication skills Identify nouns and noun phrases Identify key points in text, Maths skills Reading and plotting line graphs Drawing bar charts. Present reasoned explanations, including explaining data in relation to predictions and hypotheses Evaluate data, showing awareness of potential sources of random and systematic error. Literacy & Communication skills The use of sentences to explain ideas clearly. 	<p>Skills:</p> <ul style="list-style-type: none"> Evaluate data, showing awareness of potential sources of random and systematic error. Literacy & Communication skills The use of sentences to explain ideas clearly. Maths skills Identify anomalous results (outliers) Identify ranges Use a variety of charts and graphs to present and analyse data
HOW DO WE BUILD ON SKILLS AND KNOWLEDGE?	<p>This topic acts as an introduction to KS3 Chemistry. Particle model is the core theme underpinning other ideas in Chemistry. The topic is used as an opportunity to work out the prior knowledge and understanding of students</p>	<p>Builds on ideas from the separating mixtures topic, investigating separating mixtures in more detail. Builds on work carried out in Primary school and addresses misconceptions that may have arisen from this.</p>	<p>Builds on ideas from the separating mixtures topic, investigating electrical energy in more detail. Builds on work carried out in Primary school and addresses misconceptions that may have arisen from this.</p>	<p>Builds on ideas from the periodic table topic, investigating electrical energy in more detail. Builds on work carried out in Primary school and addresses misconceptions that may have arisen from this.</p>	<p>Builds on ideas from the periodic table topic. Builds on work carried out in Primary school and addresses misconceptions that may have arisen from this.</p>	<p>Builds on ideas from the elements topic, investigating electrical energy in more detail. Builds on work carried out in Primary school and addresses misconceptions that may have arisen from this.</p>

LINKS TO THE WORLD i.e. links to careers; equality: gender, class, ethnicity, etc.; different subjects	Careers: STEM based e.g; research chemist, pharmacist, environmental chemist, investment analyst, lab technician, textile colour technician <ul style="list-style-type: none"> Post 16 : A Level Biology A level Chemistry 	Careers: STEM based e.g; research chemist, pharmacist, environmental chemist, investment analyst, lab technician, textile colour technician <ul style="list-style-type: none"> Post 16 : A Level Biology A level Chemistry 	Careers: STEM based e.g; research chemist, pharmacist, environmental chemist, investment analyst, lab technician, textile colour technician <ul style="list-style-type: none"> Post 16 : A Level Biology A level Chemistry 	Careers: STEM based e.g; research chemist, pharmacist, environmental chemist, investment analyst, lab technician, textile colour technician <ul style="list-style-type: none"> Post 16 : A Level Biology A level Chemistry 	Careers: STEM based e.g; research chemist, pharmacist, environmental chemist, investment analyst, lab technician, textile colour technician <ul style="list-style-type: none"> Post 16 : A Level Biology A level Chemistry 	Careers: STEM based e.g; research chemist, pharmacist, environmental chemist, investment analyst, lab technician, textile colour technician <ul style="list-style-type: none"> Post 16 : A Level Biology A level Chemistry A level physics,
ASSESSMENTS Summative and Formative as applicable	Formative: constant AFL using a range of techniques, including self and peer assessment, verbal feedback, questioning, quizzes and regular book marking with specific targets (EBI) every 6 lessons. Summative: Transition test	Formative: constant AFL using a range of techniques, including self and peer assessment, verbal feedback, questioning, quizzes and regular book marking with specific targets (EBI) every 6 lessons. Summative: End of unit test – particle model	Formative: constant AFL using a range of techniques, including self and peer assessment, verbal feedback, questioning, quizzes and regular book marking with specific targets (EBI) every 6 lessons. Summative: End of unit test – separating mixtures	Formative: constant AFL using a range of techniques, including self and peer assessment, verbal feedback, questioning, quizzes and regular book marking with specific targets (EBI) every 6 lessons. Summative: End of unit test – periodic table	Formative: constant AFL using a range of techniques, including self and peer assessment, verbal feedback, questioning, quizzes and regular book marking with specific targets (EBI) every 6 lessons. Summative: End of unit test - Elements	Formative: constant AFL using a range of techniques, including self and peer assessment, verbal feedback, questioning, quizzes and regular book marking with specific targets (EBI) every 6 lessons. Summative: End of unit test – Acids and alkalis and Chemical energy End of Year Exam
FEEDBACK SUPPORTS LEARNING	Opportunity for students to reflect on learning, respond to feedback, improve work, etc. 	Opportunity for students to reflect on learning, respond to feedback, improve work, etc. 	Opportunity for students to reflect on learning, respond to feedback, improve work, etc. 	Opportunity for students to reflect on learning, respond to feedback, improve work, etc. 	Opportunity for students to reflect on learning, respond to feedback, improve work, etc. 	Opportunity for students to reflect on learning, respond to feedback, improve work, etc.

QUALITY FIRST TEACHING	<ul style="list-style-type: none"> ✓ Strategies to learn more, remember more (metacognition) used in lessons e.g. retrieval, elaboration, interleaving, dual coding, etc. ✓ Differentiation and reasonable adjustments for students with SEND, EAL, etc. such as scaffolding, visual aids, audio, physical resources, planned questioning, etc. ✓ Opportunities for Literacy, Numeracy and Oracy, including a focus on reading ✓ Opportunities to apply key concepts and address misconceptions 					

Year 9

	Autumn 1	Spring 1	Summer 1
KNOWLEDGE	UNIT OF WORK: 1. Periodic Table <ul style="list-style-type: none"> - Atoms, elements and compounds - Chemical equations - Separating mixtures - Models of the atom - Features of the atom - Isotopes and RAM - Electrons in atoms - Developing of the periodic table - The periodic table - Alkali metals - Halogens - Transition metals 	UNIT OF WORK: 2. Bonding & Structure <ul style="list-style-type: none"> - Ionic bonding - Ionic structure and properties - Covalent bonding - Small molecules and polymers - Giant covalent - Graphene and fullerenes - Metals and alloys - Nano-chemistry 	UNIT OF WORK: 3. Chemical calculations <ul style="list-style-type: none"> - Conservation of mass and balanced chemical equations - Relative formula mass - Mass changes when the reactant or product is a gas - Chemical measurements - Moles - Amount of substance - Using moles to balance equations - Concentration of solutions - Percentage yield and atom economy - Amount of substance in gases
	Skills : Safe use of a range of equipment to separate chemical mixtures Use SI units and the prefix nano Recognise expressions in standard form. Visualise and represent 2D and 3D forms including twodimensional representations of 3D objects Explain how testing a prediction can support or refute a new scientific idea.	Skills: Visualise and represent 2D and 3D forms including twodimensional representations of 3D objects Recognise substances as small molecules, polymers or giant structures from diagrams showing their bonding	Skills: Opportunities within investigation of mass changes using various apparatus Recognise and use expressions in decimal form. Recognise and use expressions in standard form Use an appropriate number of significant figures Understand and use the symbols: =, <>, >, α, ~ Change the subject of an equation Use ratios, fractions and percentages. Substitute numerical values into algebraic equations using appropriate units for physical quantities.
HOW DO WE BUILD ON SKILLS AND	They will see how to interpret chemical formulae and extend their KS3 knowledge of the law of the conservation of mass, leading them to balance chemical equations. It is important that they understand that when balancing an equation, the formula of the substance must not change.	In this section, students have developed their understanding of the states of matter from KS3. They have built upon their understanding of the particle model, using this to explain the energy transfers involved when substances change state.	In this section, students will build upon their understanding of the structure of atoms and sub-atomic particles to understand relative atomic mass and relative formula mass. Students should be able to use relative atomic masses to calculate relative formula masses of compounds.
LINKS TO THE WORLD i.e. links to careers; equality; gender, class, ethnicity, etc.;	Careers: STEM based e.g; research chemist, pharmacist, environmental chemist, investment analyst, lab technician, textile colour technician	Careers: STEM based e.g; research chemist, pharmacist, environmental chemist, investment analyst, lab technician, textile colour technician <ul style="list-style-type: none"> • A level Chemistry Biological sciences, Medicine and allied subjects, Veterinary sciences, Engineering and Technology, Physical sciences	Links to Maths : substitution and rearrangement of equation. Recognise and use expressions in decimal form.</p>	<p>Skills:</p> <ul style="list-style-type: none"> • Manipulating equations • Solving multi-step calculations • Graph skills • Identification of variables • Writing methods • Interpreting exam questions • Comparing • Evaluating • Application of knowledge to unfamiliar contexts
HOW DO WE BUILD ON SKILLS AND KNOWLEDGE?	In this chapter, students will build upon their understanding of the structure of atoms and sub-atomic particles to understand relative atomic mass and relative formula mass. Students should be able to use relative atomic masses to calculate relative formula masses of compounds	Students apply their knowledge and understanding from the Organic chemistry introductory lessons done in Y10. They build on not only identifying organic structures and naming them, but understand how the structures affect their reactivity.	In this chapter, students have developed their understanding of rusting from KS3 to understand how both water and air are required for iron to corrode. They should be able to explain how the two methods for preventing rusting – barrier methods and sacrificial methods – disrupt the oxidation of iron and prevent corrosion.	In this chapter, students have developed their understanding of rusting from KS3 to understand how both water and air are required for iron to corrode. They should be able to explain how the two methods for preventing rusting – barrier methods and sacrificial methods – disrupt the oxidation of iron and prevent corrosion.	

LINKS TO THE WORLD i.e. links to careers; equality; gender, class, ethnicity, etc.;	Careers: STEM based e.g; research chemist, pharmacist, environmental chemist, investment analyst, lab technician, textile colour technician A level Chemistry Biological sciences, Medicine and allied subjects, Veterinary sciences, Engineering and Technology, Physical sciences	Careers: STEM based e.g; research chemist, pharmacist, environmental chemist, investment analyst, lab technician, textile colour technician A level Chemistry Biological sciences, Medicine and allied subjects, Veterinary sciences	Careers: STEM based e.g; research chemist, pharmacist, environmental chemist, investment analyst, lab technician, textile colour technician A level Chemistry	Careers: STEM based e.g; research chemist, pharmacist, environmental chemist, investment analyst, lab technician, textile colour technician • A level Chemistry Biological sciences, Medicine and allied subjects, Veterinary sciences, Engineering and Technology, Physical sciences	
ASSESSMENTS Summative and Formative as applicable	Formative: constant AFL using a range of techniques, including self and peer assessment, verbal feedback, questioning, quizzes and regular book marking with specific targets (EBI) every 6 lessons. Summative:	Formative: constant AFL using a range of techniques, including self and peer assessment, verbal feedback, questioning, quizzes and regular book marking with specific targets (EBI) every 6 lessons.
